

HOW-TO GUIDE · MOBILE

From USDT on Avalanche in MetaMask to USDC in Revolut (mobile)

Last updated: 2026-10-12

This guide shows how to swap USDT to USDC in MetaMask on the Avalanche network and then send your USDC to Revolut — step by step in MetaMask and Revolut.

The guide shows the steps on mobile. Menus, button names and layout may differ slightly between iPhone (iOS) and Android, and between app versions — the principles are the same. The Revolut screenshots are from the Swedish app.

1 Swap USDT to USDC in MetaMask

Open MetaMask

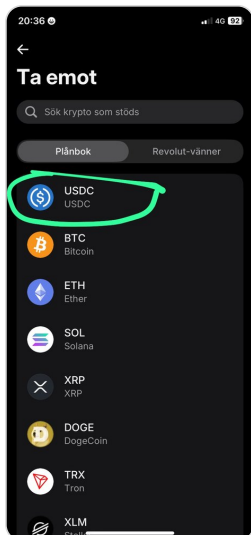

1. Select your wallet.
2. Make sure you are on the **Avalanche C-Chain** network.
3. Check that you can see your USDT balance.

Start a swap

1. Tap **Swap**.
2. Under **From**, select **USDT**.
3. Under **To**, select **USDC**.
4. Check that both USDT and USDC are on Avalanche.
5. Enter the amount you want to swap.
6. Review the exchange rate and fees.
7. Tap **Swap/Confirm** if everything looks right.

You normally need a little  **AVAX**  for the network fee.

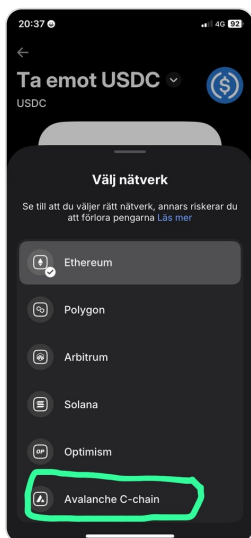

Important: On Avalanche there is both **USDC** and **USDC.e**. They are different token variants. Choose regular, **native USDC** if you are going to use it in the next step.

2 Find the right receiving address in Revolut

Open Revolut

1. Tap **Crypto**.
2. Select **Receive**.
3. Find **USDC**.
4. Tap **USDC**.

2b Choose Avalanche C-Chain

5. Check which networks you can choose between.
6. Select **Avalanche C-Chain**.
7. Copy the USDC address that Revolut shows.

Revolut itself warns you: choose the right network, or you risk losing the funds.

3 Set the right network in MetaMask and send

1. Open MetaMask.
2. Select **Avalanche C-Chain**.
3. Select **USDC**.
4. Tap **Send**.
5. Paste the USDC address from Revolut.
6. Check that the network is **Avalanche** in both apps.
7. Enter a small test amount that meets Revolut's minimum deposit.
8. Review and confirm.

Wait until the test transfer shows up in Revolut before you send the rest. ★

4 Wallet settings in Revolut

It is important to tell two things apart:

FROM

Your **MetaMask wallet** is the wallet you send the money **from**.

TO

Your **Revolut deposit address** is the address you send the money **to**.

If Revolut asks you to verify or register an external wallet, follow the instructions in the app and use the address of your own MetaMask account.

You **never** need to share your recovery phrase or private key.

Good to know

- Same network all the way: USDC on **Avalanche C-Chain** in MetaMask must go to a USDC address on **Avalanche C-Chain** in Revolut.
- Choose **native USDC** — not USDC.e — when you swap.
- Keep a little **AVAX** in your wallet, or you can't pay the network fee.
- Always send a small test amount first.
